

Amendments to the Claims

This listing of claims replaces all prior versions, and listings, of claims in this application.

Listing of Claims:

1-11. (Canceled)

12. (Previously Presented) A method for achieving cosmetic decoration of the skin using light, comprising:

exposing a body part to light and highlighting a surface of the skin to emphasize a contour of the body part, wherein a prescribed light is made to irradiate the skin for the purpose of varying the degree of pigment deposition in different areas,

wherein the light to irradiate the skin is a laser beam.

13. (Previously Presented) A method for achieving cosmetic decoration of the skin using light, comprising:

exposing a body part to light and highlighting a surface of the skin to emphasize a contour of the body part, wherein a prescribed light is made to irradiate the skin for the purpose of varying the degree of pigment deposition in different areas,

wherein the deposition of pigment is made to occur more in the area of the skin requiring to assume a darker color by allowing a light other than a laser beam to irradiate the area of the skin requiring a darker color in a larger dosage.

14. (Previously Presented) A method for achieving cosmetic decoration of the skin using light, comprising:

exposing a body part to light and highlighting a surface of the skin to emphasize a contour of the body part; and

applying a pigment deposition promoting agent capable of promoting pigment deposition to an area of the skin requiring to assume a darker color.

15. (Previously Presented) A method for achieving cosmetic decoration of the skin using light, comprising:

exposing a body part to light and highlighting a surface of the skin to emphasize a contour of the body part; and

controlling the deposition of pigment to occur less in an area of the skin requiring to assume a brighter color by applying a whitening agent capable of inhibiting pigment deposition to the area of the skin required to assume a brighter color.

16. (Previously Presented) A decorative aid provided with a cover adapted to hide a prescribed area of skin, said cover being formed of a plurality of cover pieces adapted to hide the prescribed area of the skin.

17. (Previously Presented) A projector provided with a light source adapted to permit emission of light capable of inducing pigment deposition on the skin and a filter adapted to pass said light emitted from said light source in such a manner that the light irradiating the skin

positioned at a prescribed distance from said light source may be in a larger amount in the area requiring to assume a darker color.

18. (Previously Presented) A pack provided with a sheet to be used as applied fast to the skin, said sheet having the part thereof corresponding to the area of the skin requiring to assume a darker color coated or impregnated with a pigment deposition promoting agent capable of promoting deposition of pigment.

19. (Previously Presented) A pack provided with a sheet to be used as applied fast to the skin, said sheet having the part thereof corresponding to the area of the skin requiring to assume a brighter color coated or impregnated with a whitening agent capable of inhibiting deposition of pigment.
